

Add-on Roundup

What are add-ons?

Add-ons are `.jar` files used to extend the capabilities of the main plugin. We offer free add-on creation to provide support for plugins you want displayed in the multiplier menu.

Loading an add-on

For an add-on to be loaded, the `.jar` file must be placed in the `plugins\IMultipliers\addons` folder followed by the execution of the plugin's reload command or a server restart. You can verify if an add-on has been loaded by running the command `/multiadmin addons`.

	Name	Size
<input type="checkbox"/>	 PetMultiAddon-1.0.jar	3.5 KiB

Creating an add-on

Creating an add-on is fairly simple. A more in-depth explanation will be provided in the Developer API chapter.
